

Are you interested in Production IT, Industry 4.0 and digitalization? Then join us at our family owned and run company, and work on projects internationally as our new

MES Engineer (m/f/d)

Skills

- Good communication skills
- Willingness to learn
- Able to work independently and under time pressure as SW commissioning has to be done in an operating manufacturing environment.
- English or German written and spoken

Place of work

Salzgitter (DE), Central Hungary or Western Hungary.

A large portion of the work can be done from home office, with regular visits to the customer's site.

Your team leader will be located in Germany.

Main responsibilities

- Set up and preparation of servers for the deployment of Manufacturing Execution Systems (MES).
- Development, testing and rollout of software solutions for the control servers of production lines.
- Consulting the customers' experts and working-out specifications
- Troubleshooting – on site and remotely

Qualification

- Bachelor's degree in electrical engineering, mechatronics, automation, informatics or equivalent.
- Familiar with XML communication
- Basic knowledge of Client and Server architectures
- Basic knowledge of Oracle/SQL databases
- Experience in higher level programming languages (preferably C++, C#/.Net, JavaScript, TypeScript, Angular, HTML5, Node & NPM)

What can you expect?

- Being part of a supportive international team with strong family values
- Trainings in MES and adjacent areas
- Get to know various manufacturing companies and their processes
